Dear reader,

Is your summer holiday already passed? Or do you still have plans for August or September? A visit to Belgium where the first world war is commemorated "with chocolate" is something different for a change. Or perhaps you already started with the new products for 2015. With the Power Slim or transparent Light tunnels we will be at your service, to help achieve this "a bit faster". Of the different tempering machines, the model of 60 kg will be illustrated as this is by far the most popular type. And to come back on the holiday, we will show some pictures of a chocolate-training for kids. Enjoy the late summer and especially a lot of reading pleasure with this mailing!

ZOKOLA
MADE IN CHOCOLATE
www.zokola.be

1914 - 2014

Exactly 100 years ago, the first World War broke out. In Belgium and the neighbouring countries, there are now many commemorations and celebrations planned. The red poppy flourished abundantly along the Belgian war fields at that time, and were noticed by both enemy and friend. The blood-red flower symbolizes the commemoration so many years later. Some of our clients were inspired by this and they have developed some wonderful products. For the displayed chocolate poppies, Prefamac designed a customized chocolate mould, which is used intensively, practically 24/7. Another customer also came on the market with a special poppy packaging for some of its products.

Click on **more pictures** to get some ideas for what it is nice in your country or region. Prefamac can always help you think, how to work this out on very short notice.

Fast Power Slim

Wages are expensive. Cleaning is a must, but cleaning costs money. Lots of money. The POWER SLIM cooling tunnel is a wonderful solution for this costly cleaning problem. When

opening the covers, both the upper carpet belt and the return belt are accessible. We already start from 500 mm belt width, but the majority of these tunnels is between 820 and 1600 mm width. The length is determined by your available space and the required cooling capacity (for the various products that you wish to cool). The drive can be single or double, as well as the control of the carpet belt.

At **more pictures**, we show both the POWER SLIM and the POWER PLUS tunnels with removable "bottom plates" to solve the cleaning problem.

Look the chocolate becomes hard!

For the applications of 400 and 500 mm belt width (620 mm on request) the Prefamac cooling tunnel LIGHT is deployed. The standard model is always with white detachable covers with a very high insulation value.

The opaque covers can also be executed with one or more windows (with light) so that you can nicely follow the cooling process. What is new with the Light tunnel, is one with transparent covers. The success of customers who choose their products on-site, and then afterwards take it home or consume it right away, is a modern trend. With the transparent Light and a coloured tempering machine, you can count on success with both the younger and the older customers.

Choose **more pictures**, where we also show the traditional Light tunnel and the stainless steel or coloured Inspire tempering machine. If this does not work inspiring !!

CONTINUA 60KG

The Continua60 is a smasher

For the tempering machines Prefamac lets you choose between 15, 30 and 60 kg capacity. 60 kg is the smasher because of the small price difference with the other models. Of 45°C to 28/30°C can be done in about 15 minutes, so the production level can be increased with this simple and economical machine.

The Continua60 can be used for filling moulds or hollow figures. With various dosing heads (quickfills) and a standard interval function it can be done even faster. Or with a pneumatic moulds scraper with vibration function. Also, an enrober belt for chocolates, cookies or truffles is available. Thus, it is a very easy and very flexible machine. For small and medium businesses, or labs.

Choose **more pictures** where the different options are shown. Also a melting kettle with pump station is presented, which constantly provides chocolate at 45°C.

Chocolate and holiday fun

Parents want their young kids rather not spend the holidays on the computer or playing on the iPhone. In England and The Netherlands SciTech thus organizes since several years a chocolate-training for young kids. Everything from A to Z is taught with the simple Prefamac machines. One or two weeks for the little experts among them. Thanks for this great initiative! So we will definitely see some highly motivated chocolate confectioners and cookie bakers in the future.

Click on **more pictures** where we show some young whizzes at work.
